The Fund’s stated dividend and distribution amounts are ESTIMATES as of September 9, 2016, and are subject to significant change. Investing in the Fairholme Focused Income Fund involves risk including loss of principal. The Fund is a non-diversified mutual fund, which means that the Fund invests in a smaller number of securities when compared to more diversified funds. This strategy exposes the Fund and its shareholders to greater risk of loss from adverse developments affecting portfolio companies. The Fund’s investments are also subject to interest rate risk, which is the risk that the value of a security will decline because of a change in general interest rates. Investments subject to interest rate risk will usually decrease in value when interest rates rise and rise in value when interest rates decline. Also, securities with long maturities typically experience a more pronounced change in value when interest rates change. Debt securities are subject to credit risk (potential default by the issuer). The Fund may invest without limit in lower-rated securities. Compared to higher-rated fixed income securities, lower-rated debt may entail greater risk of default and market volatility.
